

Zakia Mahmoud Hanafi

Location: Selangor, Malaysia |

Email: zakiahanafy1@gmail.com

GitHub account: <https://github.com/zeko-1> | LinkedIn profile: <www.linkedin.com/in/zakia-mahmoud-b0812331a>

Computer Science student (CGPA: 3.97) with hands on experience designing and building full-stack, multi-agent software systems using Python, OOP principles, and PostgreSQL/Supabase. Skilled in translating real world problems into scalable, modular software architectures from backend orchestration layers to deployed student facing tools. Strong communicator and team collaborator with a track record of leading technical projects from concept to execution. Seeking a Software Development internship to apply and grow these engineering skills in a production environment

EDUCATION

City University Cyberjaya Dean's List x3
Selangor, Malaysia

Bachelor of Computer Science — Artificial Intelligence Track (2nd Year) | CGPA: 3.97 / 4.00

- **Academic Honors:** Awarded Dean's List for 3 consecutive semesters in recognition of academic excellence.
- **Specialization:** Specialized coursework in AI algorithms, machine learning fundamentals, and intelligent software engineering.

TECHNICAL & CORE SKILLS

AI & Research Interest: Multi Agent AI Systems, XAI, AI Interpretability (Black Box Demystification), Model Logic & Workflows

Programming language: Python, Java, SQL

Frameworks & Libraries: React, Next.js, FastAPI, JavaFX, Panda, Numpy

AI/ML: Machine Learning, NLP, DL

Tools: Git, GitHub, Docker, Supabase, VS

TECHNICAL EXPERIENCE

AI Engineer — AI Procurement Command Center - 2026

Hackathon Project

- Architected and implemented a **multi-agent AI system** designed for real-time detection and response to procurement and supply-chain disruptions.
- Engineered specialized AI operators for incident classification, inventory intelligence, supplier analytics, and automated recovery planning.
- Integrated AI workflows with a **PostgreSQL/Supabase** backend and built an orchestration layer to coordinate seamless multi-agent execution.

Software Developer — University Track Recommendation System - 2026

Object-Oriented Programming Course Project

- Developed an AI-guided software solution to assist incoming university students in making informed track decisions.
- Applied Object-Oriented Programming (OOP) principles to design and implement scalable, modular architecture.
- Integrated AI functionality to deliver personalized guidance based on student preferences and academic needs.
- Identified a practical real-world problem on campus and translated it into a deployed software tool.

UI/UX Designer — NovaShip Averis – 2026

Hackathon Project

- Designed the web application interface for an AI-assisted shipping document verification platform, focusing on clarity, usability, and an efficient workflow.
- Created user flows and dashboard layouts to help users review shipping emails, document extraction results, and verification statuses.

- Designed a clear visual system for presenting MATCH, MISMATCH, MISSING, and HUMAN REVIEW statuses, making complex verification results easy to understand.
- Collaborated with the development team to translate product requirements into a functional and user-friendly interface.

PROJECTS

MajorDNA — Career Recommendation System

JavaFX | Java | OOP | JSON/CSV

- Developed a desktop career recommendation application for university students, using personality, intelligence, interests, skills, and work-style assessments to generate explainable career recommendations.

AI Supply Chain Commander

AI Agents | Supabase | Slack | CSV Data

- Developed an AI powered procurement workflow that processes supplier data, identifies purchasing needs, and supports approval based procurement decisions through automated agent workflows.

Lumi World — AI Shopping Assistant

Chrome Extension | AI | JavaScript

- Developed an AI powered shopping assistant that helps users stay within their budget by interacting with sellers and supporting price negotiation through a browser-based experience.

NovaShip Averis — AI-Assisted Shipping Document Verification

Next.js | React | TypeScript | FastAPI | Python | LangGraph

- Designed a user friendly interface for an AI assisted shipping workflow that processes emails and documents, presents extracted information, and clearly displays document verification results for human review.

EcoAI Cooling — AI Data Center Cooling System

AI/ML | IoT | Sustainability

- Developed a concept for an AI assisted data center cooling system that uses sensor data to optimize cooling decisions and reduce water waste, with a future vision for closed-loop water recycling.

LEADERSHIP & COMMUNITY ENGAGEMENT

Founder & President — Teach Me Club

2021 – 2023

High School Leadership Role

- Founded and led a student learning club centered on peer-to-peer knowledge sharing across academic subjects and tech skills.
- Organized interactive sessions connecting students and teachers to share expertise with the wider school community.
- Established an inclusive, supportive environment encouraging students to develop confidence in presenting and teaching.

Volunteering — The Lost Food Project

2026 – present

Community Volunteering Role

- Supported the organization of food donation events and community initiatives to help collect and distribute surplus food.
- Assisted with warehouse operations, including sorting, organizing, and preparing donated food items for distribution.

- Collaborated with volunteers to ensure that donated food was properly categorized and handled efficiently.

Languages

Arabic — Native

English — Proficient (IELTS 6.0)
